# CMyApps Components

The CMyApps has 2 major components:

## APP DESIGNER Component

It's like webpage designer. It provides functionalities for mobile app designer to create fantastic and wonderful look-and-feel layouts with good user experience. All designers have to do are drag-and-drop and point-and-touch.

## END USER Component

It's like web browser. It get the products / order / images / videos / attributes / etc information and associated layout format from backend server and combining to provide a nice looking mobile screens for end user to have good user experience.

# CMyApps Features

CMyApps brings the solution to your devices. It transfers your store website on to mobile devices apps without compromising core functionality:

- Attractive user-friendly shopping cart experiences.
- Easy to use drag-and-drop, point-and-touch features that accelerate the app creation process.
- Customizable layouts / themes / font sizes / colors / images.
- Integrate with WordPress WooCommerce website to synchronize all products, prices, descriptions, pictures, stock levels, user management, shipping.
- Filter and search for a product based on its name and description.

# CMyApps Features

- App coupon, reward points, product label, etc.
- Have push notifications available to draw customers' attention.
- Work with common payment methods.
- Smooth checkout flow & multiple shipping.
- Multi-lingual support.
- Continuous upgrade & updates which would help the integrations with the future release and features on WordPress WooCommerce.

# Why CMyApps is Better Choice

## CMyApps

- 100% native app
- Intuitive drag-and-drop, point-and-touch to create professional mobile app layouts
- Design and publish layouts in minutes rather than days
- Excellent user experience (UX)
- Easy to support and upgrade

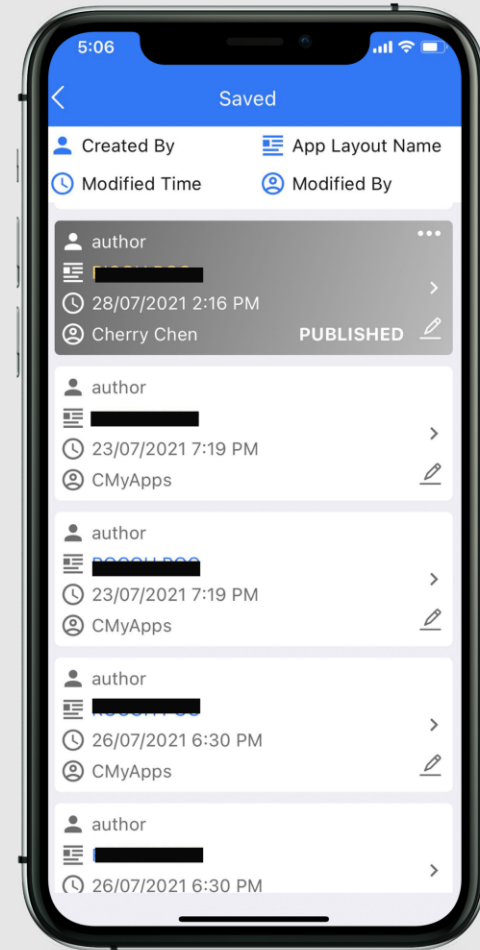

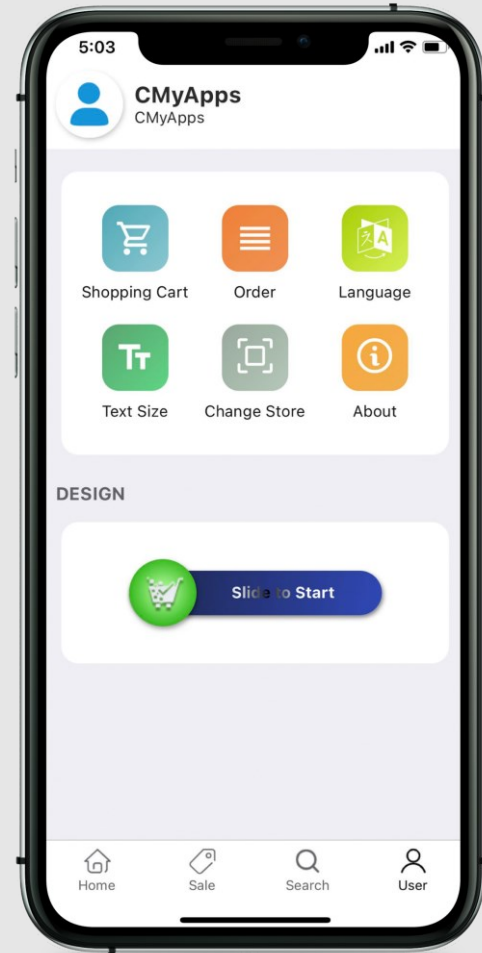

## Competitors

- Mostly HTML5
- Extension from desktop website to mobile website
- Mobile layout must be the same theme as website layout
- Poor user experience as users are just like reading another website on mobile devices.
